SPECIAL FEATURES

A corrugated produce crate for the packing of fresh produce for the domestic market.

The crate has been designed as a substitute for the plastic crates currently used in the NZ market.

Two options have been developed:

1. A crate that is erected by hand for the smaller user
2. A machine erected version for larger users.

007-30

The crate is made from corrugated board with a mix of both recycled and Kraft papers. To date commercial volumes have been used in the citrus industry with trials currently underway in a wide range of other fresh produce items.

The crate has been developed to fit exactly on the 1200 x 1200ft print pallet and to fit within the NZ distribution systems, this often means mixed pallets of produce in both boxes and crates.
